Professor and Center Chief,  
Department of Plastic and Reconstructive Surgery,  
International Center for Lymphedema,  
Hiroshima University Hospital

### Dr. Lanhua Mu

Professor and Chief,  
Breast Department Hainan Hospital,  
Hainan Medical College  
Professor,  
Plastic and Aesthetic Surgery Department,  
Peking University People's Hospital

*Breast cancer is the first incidence rate cancer in Chinese women now. The earlier diagnosed, the better result of the treatment. Surgical treatment is not only to "cut" or "dissect", but also, we refine it to be "precision surgical treatment" for "mastectomy" and axillary (sentinel lymph nodes or dissection), at same time, to "precision reconstruct" including breast (partial or total) reconstruction and axillary dissection related upper arm lymphedema prevention and treatment. During this process, microsurgery / supermicrosurgery / nano-microsurgery is indispensable. And lymphatic imaging technique is indispensable also.*

*As a female plastic surgeon, how can I insist on the above? How can I popularize this? How can I encourage young female plastic surgeons to learn this? I would love to share my 33 years' experience focusing on this work.*
